

Create the Flask Application

Date	17 November 2022
Team ID	PNT2022TMID29381
Project Name	Smart Fashion Recommender Application

Flask code and running :

The screenshot displays the Visual Studio Code editor with a Python file named `app.py` open. The code is a Flask application that uses `tkinter.tix` for form rendering. It includes routes for an index page, a success message, and a login page. The terminal at the bottom shows the application running on `http://127.0.0.1:5000`. The output includes a warning about the development server and a deprecation warning for `tkinter.tix`.

```
1 from tkinter.tix import Form
2 from flask import Flask, render_template, url_for, redirect, request
3
4 app = Flask(__name__)
5
6
7 @app.route('/')
8 def index():
9     return render_template("index.html")
10
11 @app.route('/success/<name>/<phone>/<email>')
12 def success(name=None, phone=None, email=None):
13     return " <h1>Registered Successfully</h1><h2>Your Details Are:-</h2> {} <br>{} <br>{} ".format(name, phone, email)
14
15 @app.route("/login", methods=['POST', 'GET'])
16 def login():
17     if request.method == 'POST':
18         user = request.form['name']
19         email = request.form['email']
```

Terminal Output:

```
* Serving Flask app 'app'
* Debug mode: on
WARNING: This is a development server. Do not use it in a production deployment. Use a production WSGI server instead.
* Running on http://127.0.0.1:5000
Press CTRL+C to quit
* Restarting with stat
c:\Users\LENOVO\Downloads\SRC\app.py:1: DeprecationWarning: The Tix Tk extension is unmaintained, and the tkinter.tix wrapper module is deprecated
  from tkinter.tix import Form
* Debugger is active!
* Debugger PIN: 871-254-887
```
